

KILO & MILLI QUIZ

milli = $\div 1000$ · kilo = $\times 1000$

Name: _____

Class: _____

Score: _____ / 16

milli = $\div 1000$ (one thousandth) 1000 mA =
1 A 1000 mV = 1 V

kilo = $\times 1000$ (one thousand) 1 k Ω = 1000 Ω
1 km = 1000 m

#	Question	Your Answer
Part 1 — Length (Use this to learn the pattern)		
1	How many millimeters are in 1 meter?	_____
2	How many meters are in 1 kilometer?	_____
3	Convert: 5000 mm = _____ m	_____
4	Convert: 3 km = _____ m	_____

Part 2 — Voltage (Volts)		
5	How many millivolts (mV) are in 1 volt?	_____
6	Convert: 0.5 V = _____ mV	_____
7	Convert: 3300 mV = _____ V (hint: a Microbit!)	_____
8	A battery reads 1500 mV. How many volts?	_____

Part 3 — Current (Amps)		
9	How many milliamps (mA) are in 1 amp?	_____
10	Convert: 0.020 A = _____ mA (hint: typical LED!)	_____
11	Convert: 250 mA = _____ A	_____
12	Your ammeter reads 0.015 A. Write that in mA.	_____

Part 4 — Resistance (Ohms)		
13	How many ohms (Ω) are in 1 kilohm (k Ω)?	_____
14	Convert: 4700 Ω = _____ k Ω	_____
15	Convert: 10 k Ω = _____ Ω	_____
16	A resistor is labeled 2.2 k Ω . How many ohms?	_____

Rule: to convert milli $\rightarrow$ base unit, divide by 1000. To convert base $\rightarrow$ kilo, divide by 1000. To go the other way, multiply by 1000.
